Self-Checklist for Shipboard Safety Management System

Note: This Checklist indicates items to be included at least in the samples at self-checking.

* Refer to SOLAS IX/1

Bulk carrier:

If "ESP" is assigned to a dry cargo ship within Class Notation, the ship is "Bulk carrier" in terms of the ISM Code, otherwise the ship is "Other Cargo Ship".

However, it is to be confirmed whether or not the instruction from a flag state on the application of the Resolution MSC.277(85) "Clarification of the term "Bulk Carrier" and guidance for application of regulations in SOLAS to ships which occasionally carry dry cargoes in bulk" has been adopted on case by case basis. [Note]Recently, some "Other cargo ships" are assigned with "ESP" at the owner's option.

If there are any doubts, it shall be checked according to the definition of Bulk Carrier specified in SOLAS IX/1.6, i.e. ships constructed with single deck, top-side tanks and hopper side tanks in cargo spaces and intended primarily to carry dry cargo in bulk; or ore carrier; or combination carrier.

If there is a discrepancy of the vessel types between Safety Construction/Safety Equipment and the SMC, the "Explanatory Note" is available from Class BKI or Statutory Division.

**Note:

The following items are detainable deficiencies by PSC. Emergency fire pumps, lifeboats, and fire-dampers are continuing to be the major items where most detainable deficiencies.
